DETAILED ACTION

This application is in condition for allowance except for the following formal matters:

Some editorial corrections (no space between two words) are required in the specification and claims, for examples, claim 1, line 8; specification, page 15, second line from the bottom.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

The following is an examiner's statement of reasons for allowance:

The references of record do not teach or suggest a method comprising: forming a first dopant diffused region using first resist and the gate electrode as a mask, performing first ashing, forming a second dopant diffused region using second resist, the gate electrode, and sidewall as a mask, performing second ashing. The ashing processing time of the first ashing is shorter than that of the second ashing (claims 1-3).

forming a first dopant diffused region using first resist and the gate electrode as a mask, performing first ashing using oxygen; forming a second dopant diffused region using second resist, the gate electrode, and sidewall as a mask, performing second ashing using a mixed gas of oxygen and another reaction gas (claims 4-6).

forming a first dopant diffused region using first resist and the gate electrode as a mask, performing first ashing and first chemical processing to remove the first resist;

Art Unit: 1765

forming a second dopant diffused region using second resist, the gate electrode, and sidewall as a mask, performing second ashing and second chemical processing to remove the second resist. The chemical processing time of the first one is shorter than that of the second one (claims 7-11).

forming a first dopant diffused region by implanting a dopant in the substrate with a mask and the gate electrode, performing first chemical liquid processing to clean the substrate; forming a second dopant diffused region by implanting a second dopant in the substrate using the gate electrode and sidewall as a mask, performing second chemical liquid processing to clean the substrate. The chemical liquid processing time of the first one is shorter than that of the second one (claims 12-16).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
